We help make institutions better investors.

The value we deliver is by:

- Saving our clients time
- Improving outcomes
- Reducing workflow error

30+ years

of managing institutional assets through a variety of market cycles

350+

Technical and investment professionals focused on understanding client needs

427 institutional strategic partners

with custom investment solutions built to help achieve their goals

\$85 billion

institutional assets under management

All data as of March 31, 2024.

Clients represent a partial list of current institutional clients, selected from SEI's complete client roster, all of which are global institutional clients, have assets over \$50 million and have provided SEI with permission to use their names in marketing materials. It is not known whether the listed clients approve of SEI or the advisory services provided. The inclusion of particular clients on this list does not constitute an endorsement or recommendation of SEI's products or services by such clients.

Executive summary

6/30/24 Market Value	Q2 2024 Return	FY 6/30/24 Return	2023 Return	2022 Return	2021 Return
\$100,463,216	1.7%	12.7%	14.0%	-10.5	13.8%

- Asset Allocation change implemented on 6/1. Details available on slide 24.
- The S&P 500 ended the second quarter with a technology-driven rally that spurred a 15.29% return during the first half of the year, its sixth best two-quarter start to a year since 1990. Moreover, the near 15.3% performance is the second strongest election year start since 1944. Unusually, however, only a handful of Big Tech company stocks have fueled this year's rally.
- Additional catalysts behind the sustained broad market rally include further easing in consumer inflation. The most current personal-consumption expenditures (PCE) price index was flat in May for the first time in six months and its year-over-year measure came in at 2.6%, down from 2.7% the month prior. The Fed's preferred inflation gauge, the core PCE price index that excludes food and energy, rose just 0.1% in May while its annualized rate declined from 2.8% to a 38-month low of 2.6%.
- In other key data, U.S. real GDP growth slowed to an annual pace of 1.4% in the first quarter, up slightly from 1.3% previously estimated but is considerably lower than 3.4% economic growth in the fourth quarter 2023. San Francisco Fed President Daly said May's inflation data suggests that the central bank's monetary policy is working to control inflation and cool the economy.
- Recovering corporate earnings are also helping boost investor sentiment. After earnings on S&P 500 companies increased at a 5.5% year-over-year (YOY) pace in the first quarter to exceed initial estimates for 3.1%, S&P Capital IQ is forecasting second quarter 2024 earnings per share (EPS) to grow by 8.2% YoY. Estimates now also point to 9.2 EPS growth for all of 2024, followed by a 14.6% increase in 2025.

Please refer to the important disclosures accompanying your portfolio performance in this presentation for information on performance calculations.

Market performance overview

- Global economic activity picked up a bit in the second quarter, US inflation surprised to the upside, and a small number of central banks finally embarked—somewhat tentatively—on rate-cutting cycles.
- Equity market performance was varied in the second quarter. Emerging markets led the way for the first time since 2022, supported not only by continued outperformance by Taiwan and India, but also a rebound in China. US small caps and non-US large caps were both down in the quarter, though one-year performances remained solid.
- Bond yields edged higher again in the second quarter, as additional Federal Reserve rate cuts were priced out of the market due to upside inflation surprises (which lent support to inflation-linked bonds) and a labor market that remained tight despite some early indications of softening. High yield turned in another positive quarter, while emerging market debt was down.
- Commodities had a strong quarter, led by precious and industrial metals. The energy complex was up only slightly, though natural gas was up by double digits.

U.S. equity market review

- The stock market got off to a rocky start in the second quarter, as hotter-than-expected consumer prices and a downside surprise in job openings renewed investor concerns about stagflation. Large caps posted a recovery during June, while small caps remained in negative territory.
- Large-cap sector performance reverted to a more concentrated nature in the quarter, with tech-oriented industries dominating returns. Cyclical areas like financials, energy, industrials and materials incurred negative returns.
- As a result of cyclical sectors underperforming and tech-oriented areas outperforming, the value style meaningfully underperformed growth in the US.

Sources: Bloomberg, Russell, Standard & Poor's. US Large Cap = Russell 1000 Index, US Small Cap = Russell 2000 Index. Value and Growth represented by Russell 1000 Value Index and Russell 1000 Growth Index, respectively. Sectors represented by respective S&P 500 sector indexes. As of 06/30/2024. Past performance is not a guarantee of future results.

International equity market review

- Emerging market equities were up in the quarter while their developed market counterparts were down slightly, leading to the former's first quarterly outperformance since 2022.
- Emerging markets were led by continued strong performance from Taiwan and India, as well as a rebound in China's equity market. The South African market also contributed, while Latin American bourses struggled overall.
- The main contributor within developed markets was the US, followed by the UK. Japan and France were the primary detractors, the latter due in part to political uncertainty caused in June by Prime Minister Macron's surprise dissolution of the National Assembly and call for elections.

Purchasing managers buying the recovery

Growth trajectory as anticipated.

- Purchasing managers globally are reporting significant improvement in their countries.
- The U.S. continues to be the strongest performer among the major economies, advancing to its highest level of output in nearly a year.
- Generally speaking, the services sector remains more robust than manufacturing.
- Purchasing managers in manufacturing are reporting a modest expansion in output, led by the big emerging economies.

Source: SEI, IHS Markit. Data as of 6/30/2024. The purchasing managers' index data are from the IHS Markit global surveys. There are surveys for manufacturing and for services for all countries. Some countries, but not all, report construction and nonmanufacturing. The chart uses the composite indexes.

Fixed income review

- Treasury yields edged higher over the quarter as markets once again recalibrated the outlook for Federal Reserve (Fed) interest rate cuts due to a surprise reacceleration of inflation.
- Ongoing inflation uncertainty, US labor market developments, a recent upturn in global trade activity and commodity prices, and a Fed that has promised to remain data-dependent will all be important factors in determining the future path of interest rates.
- Investment-grade and high yield credit spreads widened slightly in the second quarter but remained below both beginning-of-the-year and long-term average levels.
- Emerging markets debt spreads widened more substantially over the quarter, but this was due in part to the re-inclusion of Venezuelan debt in certain benchmark indexes in recent months, following the lifting of US sanctions.

Sources: Bloomberg, JP Morgan, SEI. Option-adjusted spreads over US Treasuries US Investment Grade = Bloomberg U.S. Corporate Index, US High Yield = Bloomberg U.S. Corporate High Yield Index, and Emerging Market Debt = JP Morgan EMBI Diversified Sovereign Index. Tempered policy-rate expectations

Monetary policy is proceeding as expected.

- Higher-for-longer inflation should also mean higher-for-longer interest rates.
- At the start of the year, markets were pricing in as many as six or seven policy-rate cuts by the end of 2024 for the U.S. federal-funds rate, the Bank of England's (BOE) bank rate, and the European Central Bank's (ECB) deposit rate.
- We thought at the time that this expectation on the part of traders was overly optimistic. Sure enough, the consensus view of the number of policy-rate cuts between now and year-end have moved much closer to our own, as we show in the chart.
- Only Japan is expected to increase its policy rate this year, but only by 10 basis-point increments to 0.3%.
- By year-end, market pricing implies policy rates of 4.9% in the U.S., 4.8% in the U.K., 3.2% in the eurozone, and 4.3% in Canada.

Market-implied central-bank policy moves by year-end 2024

Important information: asset valuation and portfolio returns

Historical Total Index can be provided upon request. The Portfolio return, manager performance, and fund performance numbers are calculated using Gross Fund Performance, using a true time-weighted performance method (prior to 6/30/2012, the Modified Dietz method of calculation was used). Gross Fund Performance reflects the effective performance of the underlying mutual funds that are selected or recommended by SIMC to implement an institutional client's investment strategy. Gross Fund Performance does not reflect the impact of fund level management fees, fund administration or shareholder servicing fees, all of which, if applicable, are used to offset the account level investment management fees the client pays to SIMC. Gross Fund Performance does reflect certain operational expenses charged by the funds and the reinvestment of dividends and other earnings. The inclusion of the fund level expenses that the client incurs but that are offset against the client's account level investment management fees would reduce the Gross Fund Performance of the mutual funds. For additional information about how performance is calculated, please see your monthly performance report.

If applicable, alternative, property and private assets performance and valuations may be reported on a monthly or quarterly lag. Alternative, property and private assets performance is calculated gross of investment management fees and net of administrative expenses and underlying fund expenses. However: Structured Credit Fund performance is calculated gross of investment management fees and net of administrative expenses; SEI Offshore Opportunity Fund II Ltd. Class A performance is calculated net of investment management and administrative expenses; and Energy Debt Fund performance is calculated net of management fees, performance fees, as applicable, and operating expenses.

Total Portfolio Return-Net of Fund Expenses performance numbers reflect the impact of fund level management fees, sub-advisor fees (if applicable) and other administrative and operating expenses charged by the funds. Such performance numbers do not reflect the impact of account level management (OCIO) fees charged to the client pursuant to the terms of the investment management agreement with SIMC, which will reduce performance. The OCIO fee reflects the difference between the total investment management fee set forth in the Agreement and the fees paid to sub-advisers. Net portfolio performance information is available upon request to your client service representative.

Dynamic Asset Allocation Fund: performance review

Performance	Q2 2024	YTD 2024	2023	2022	2021	2020	2019	2018	2017	2016	2015	2014
SEI Dynamic Asset Allocation Fund	4.83	15.23	22.02	-16.04	31.66	20.78	27.78	-7.70	19.85	12.34	4.76	18.75
SEI Blended Benchmark**	4.28	15.29	26.29	-18.11	28.71	18.40	31.49	-4.38	21.83	11.96	1.38	13.69
Excess Return	0.54	-0.06	-4.27	2.07	2.95	2.38	-3.70	-3.32	-1.98	0.38	3.37	5.06

*A number of factors may contribute to attribution friction. Most commonly, attribution friction results from the compounding of alpha due to the performance of the beta, cash flows in DAA, sizing of static positions that are not exactly matched to a notional percentage of DAA and other general market frictions. **Benchmark was 50% S&P 500/50% 10 Year US Treasury Bond from inception to April 2012, from May 2012 to January 2013 the benchmark was 80% S&P 500, 10% iBoxx \$ Liquid High Yield Index (USD) and 10% JP Morgan EMBI Global (USD) , and from February 2013 to present the benchmark is 100% S&P 500 Index.

Performance data as of 6/30/2024. Alpha Attribution data as of 6/30/2024. Source: SEI Data Portal. *Gross fund performance reflects the effective performance of the underlying mutual funds that are selected or recommended by SIMC to implement an institutional client's investment strategy. Gross fund performance does not reflect the impact of fund level management fees, fund administration or shareholder servicing fees, all of which, if applicable are used to offset the account level investment management fees the client pays to SIMC. Gross fund performance does reflect certain operational expenses charged by the funds and the reinvestment of dividends and other earnings. The inclusion of the fund level expenses that the client incurs but that are offset against the client's account level investment management fees would reduce the gross fund performance of the mutual funds. Performance data quoted is past performance. Past performance is no guarantee of future results. The principal value and investment return of an investment will fluctuate so that shares, when redeemed, may be worth more or less than their original value. Current performance may be higher or lower. For performance data current to the most recent month end, please call 1-800-DIAL-SEI.*

*Performance is gross of investment management fees and net of administrative expenses and underlying fund expenses, with the exception of Structured Credit Fund, which is gross of investment management fees, and net of administrative expenses. **Since April 1, 2021, the launch of the Vista Fund. Clients implemented via collective investment trusts incur product-level fees, including trustee and administrative fees, which will affect performance. Actual performance for investors will be presented in the monthly statements produced by the administrator. Performance data as of 3/31/2024. Source: SEI, Data Portal. Public market indices included to support assessment of diversification benefits of above strategies. *Performance data quoted is past performance. Past performance is no guarantee of future results. The principal value and investment return of an investment will fluctuate so that shares, when redeemed, may be worth more or less than their original value. Current performance may be higher or lower. For performance data current to the most recent month end, please contact your client service representative. For additional information about how performance is calculated, please see your monthly performance report. Performance information as shown does not include any charges or fees which may or may not be imposed by SEI Investments Management Corporation for investment management services, which will reduce performance returns. For example, on an account charged 1% by a financial advisor with a stated annual return (net of mutual fund fees) of 10%, the net total return before taxes would be reduced from 10% to 9%. A ten year investment of \$100,000 at 10% would grow to \$259,400, and at 9%, to \$236,700 before taxes.*

Manager changes

Funds	Manager Addition and Rationale	Manager Termination and Rationale
Emerging Markets Equity Fund		<u>KBI Global Investors (May 2024)</u> The decision to remove KBI's Emerging Markets Equity strategy was motivated by alpha source and portfolio construction considerations. This change enhances the Fund's ability to manage value and quality alpha source exposures while improving the balance between risk and return through the use of high-conviction concentrated strategies. KBI's allocation will be redistributed among the Fund's existing managers.

Source: SEI Capital Market Assumptions. Please see important disclosures at the beginning of this section and at the back of the presentation.

For institutional investor use only. Not for public distribution. The information contained herein is confidential and proprietary to SEI and is not to be reproduced or made available in any form to any persons without the express prior written consent of SEI.

Important information

This presentation is provided by SEI Investments Management Corporation (SIMC), a registered investment adviser and wholly owned subsidiary of SEI Investments Company. The material included herein is based on the views of SIMC. Statements that are not factual in nature, including opinions, projections and estimates, assume certain economic conditions and industry developments and constitute only current opinions that are subject to change without notice. Nothing herein is intended to be a forecast of future events, or a guarantee of future results. This presentation should not be relied upon by the reader as research or investment advice (unless SIMC has otherwise separately entered into a written agreement for the provision of investment advice).

There are risks involved with investing including loss of principal. There is no assurance that the objectives of any strategy or fund will be achieved or will be successful. No investment strategy, including diversification, can protect against market risk or loss. Current and future portfolio holdings are subject to risk. Past performance does not guarantee future results.

For those SEI funds which employ a “manager of managers” structure, SIMC is responsible for overseeing the sub-advisers and recommending their hiring, termination, and replacement. References to specific securities, if any, are provided solely to illustrate SIMC’s investment advisory services and do not constitute an offer or recommendation to buy, sell or hold such securities.

Any presentation of gross mutual fund performance of underlying mutual fund investments or gross account level performance is only intended for one-on-one presentations with clients and may not be duplicated in any form by any means or redistributed without SIMC’s prior written consent.

Annual performance is calculated based on monthly return streams, geometrically linked as of the end of the specified month end.

Performance results do not reflect the effect of certain account level advisory fees. The inclusion of such fees would reduce account level performance, particularly when compounded over a period of years. The following hypothetical illustration shows the compound effect fees have on investment return: For an account charged 1% with a stated annual return of 10%, the net total return before taxes would be reduced from 10% to 9%. A ten year investment of \$100,000 at 10% would grow to \$259,374, and at 9%, to \$236,736 before taxes. For a complete description of all fees and expenses, please refer to SIMC’s Form ADV Part 2A, the investment management agreement between SIMC and each client, and quarterly client invoices.

Certain economic and market information contained herein has been obtained from published sources prepared by other parties, which in certain cases have not been updated through the date hereof. While such sources are believed to be reliable, neither SEI nor its affiliates assumes any responsibility for the accuracy or completeness of such information and such information has not been independently verified by SEI.

Index returns are for illustrative purposes only and do not represent actual fund performance. Index performance returns do not reflect any management fees, transaction costs, or expenses, which would reduce returns. Indexes are unmanaged and one cannot invest directly in an index. Any presentation of gross mutual fund performance of underlying mutual fund investments or gross account level performance is only intended for one-on-one presentations with clients and may not be duplicated in any form by any means or redistributed without SIMC’s prior written consent.

Important information

As identified in the presentation, certain funds are collective trust funds, not mutual funds. A collective trust fund is an investment fund that is maintained by a bank or trust company for the collective investment of qualified retirement plans and governmental plans, and that is exempt from SEC registration as an investment company under Section 3(c)(11) of the Investment Company Act of 1940. Collective trust funds eliminate many of the administrative costs associated with institutional and retail mutual funds.

For more information on the collective trust funds, including fees and expenses, please read the disclosure document for the trust.

There is no guarantee that the investment objective will be fulfilled. If the fund is a target date fund, the principal balance of the portfolio may be depleted prior to a portfolio's target end-date and, therefore, distributions may end earlier than expected. This risk increases if the distribution amount chosen is a significant portion of the starting principal. The target date represents the respective date when an investor intends to retire. Principal of any target date fund is not guaranteed at any time, including the target date. The projected time periods do not take into account the payment of fees to the advisor out of the portfolio or any other additional distribution from the account.

For those SEI collective trust funds that may be held in the account, the SEI collective trust fund is part of a Collective Investment Trust (the "Trust") operated by SEI Trust Company ("STC"). STC manages the Trust based on the advice of one or more third party managers, which may include SIMC. Additionally, STC serves as the trustee of the collective trust funds and maintains ultimate fiduciary authority over the management of, and the investments made, in the funds. STC is also a wholly owned subsidiary of SEI Investments Company.

Thank you.
